

Aqua Cooler Launches its NEW Indoor Chiller at ARBS 2008

Aqua Cooler, Australia's largest water cooler and drinking fountain manufacturer will be unveiling its latest Industrial Chiller specifically designed for indoor use in office buildings at the Air Conditioning, Refrigeration and Building Services (ARBS) Exhibition next month. Contributing to its many features is the ability to fit into a standard lift, enabling access to areas of a building that would have otherwise been extremely difficult or even impossible to install a chiller into. Well known as a producer of high quality Industrial Chillers built to handle the tough Australian temperatures, Aqua Cooler will also be launching its unique, specialty chiller designed for scientific use. "We are very excited about the launch of not only one, but two new products at ARBS this year" said David Wilkinson, head of Aqua Cooler's Industrial Chillers Division. He adds, "Product development is one of our key focal points, and we constantly strive to produce the highest quality products possible for our clients". Among the displays, Aqua Cooler will also feature its reliable, and ever popular, R-Series units which have been a stand out performer for the company since their release into the market 5 years ago.

Aqua Cooler's outstanding success within the refrigeration industry has continued over the years and more recently, with the addition of its new external service business to the Aqua Cooler umbrella. This new service business caters to commercial businesses throughout the Sydney metropolitan area providing service, repair, maintenance and installation of air-conditioning and refrigeration systems.

The ARBS 2008 Exhibition will be held from the 21st – 23rd of April at the Melbourne Exhibition and Convention Centre in VIC. Aqua Cooler will be exhibiting on Stand 68.
