AQUA COOLER'S LARGE M SERIES DRINKING FOUNTAINS

Aqua Cooler is renowned for its well built, quality, Australian made chilled drinking water fountains. Their wide range of drinking fountains means they have a unit available to suit almost any application. The M Series units are freestanding drinking fountains and these are available in 3 different chilling capacities over an hour. They are 10, 19 and 26 litres.

The models available in the largest size include the M10 and the M11. These units are built for the tough Australian climate and are ideally used in areas that get a lot of traffic. This includes schools, mines, hospitals, factories, and large office buildings. A larger unit will also give you piece of mind that there will be enough chilled water to go around. It is able to supply chilled water to approximately 45 - 80 people over the course of an hour.

There are 8 models in this range:

M10	Colourbond, bubbler only, unfiltered
M10F	Colourbond, bubbler only, filtered
M10FSS	Stainless steel, bubbler only, filtered
M10SS	Stainless steel, bubbler only, unfiltered
M11	Colourbond, bubbler & glass filler, unfiltered
M11F	Colourbond, bubbler & glass filler, filtered
M11FSS	Stainless steel, bubbler & glass filler, filtered
M11SS	Stainless steel, bubbler & glass filler, unfiltered
