

AUGUST **POINT OF USE WATER COOLERS**

Our point of use water coolers are the ideal solution particularly for filtration companies looking to sell the unit with their filtration equipment. Point of use water coolers, similar in design to bottle water coolers, are very easy to install and use. The Australian designed and manufactured units are able to produce 5 litres of chilled water per hour. They also feature a removable drip tray (ideal for cleaning) and a bracket for easy attachment of a cup dispenser if required. Available in hot and cold and cool and cold models, the POU is the perfect choice for businesses selling to the domestic and commercial markets alike. For further details, please contact Aqua Cooler's sales team on 02 9721 9333.
