HOT & COLD WATER COOLERS

Now is the perfect time to promote hot and cold units to your customers. We have both bottle water coolers and point of use water coolers with hot and cold models available. These units are great for hot cups of coffee, tea or even soups, especially on cold winter days! The temperature of the water is almost boiling ($92\pm$ °C), the ideal drinking temperature hot drinks should be at. These units are sturdy and robust and still also allow for a refreshing cold drink as well. To place your order, or to further discuss your requirements, please contact a member of the sales team.
